TO WHOM IT MAY CONCERN

As a haulage and plant contractor operating out of Summit Fertilisers Pty Ltd, Pinkenba, Townsville and Mackay operations, we have a constant battle with corrosion associated with contact with fertiliser products.

Since we started using the Citra Force cleaner and lanolin based products supplied by LANOTEC Australia Pty Ltd, we have noted a marked improvement in service life of our equipment.

In particular, when the trucks and Cat 966 Loader come out of the plant for maintenance, they are washed down using Citra Force and the sprayed with Heavy Duty 21 (HD21) lanolin based lubricant. This procedure has reduced considerably the corrosion in the chassis rails, cab and tipper body.

The electrical wiring and components are sprayed with HD21 which has greatly extended the service life particularly of our alternators. Previously we had been replacing alternators on a monthly basis.

We therefore have no hesitation in recommending LANOTEC products to the road haulage industry and any body working in corrosive environments.

Yours sincerely,

John Overell
